INTRODUCTION

Fakaalofa lahi atu.

We are very happy to put out this statistical release – Niue Consumer Price Index (CPI) – for the first quarter of 2025 ending 31st March.

The report is structured as follows:

1. Niue Consumer Price Index (CPI): March quarter 2025
2. Movements: Quarterly inflation of the CPI
3. Movements: Annual inflation of the CPI
4. Domestic and imported indices and inflation
5. Quarterly and annual contributions to the CPI
6. Main items which impact the CPI

The Consumer Price Index (CPI) measures changes in the prices of goods and services that households consume. It was originally introduced to provide a measure of the changes in the living costs faced by workers, so that wages could be related to the changing levels of prices. However, over the years CPI have widened its scope and is now widely used as a macroeconomic indicator of inflation. It has become a key statistic for the purpose of economic policymaking.

Inflation is ‘imported’ when domestic prices increase due to an increase in the price of imports. Imported inflation may result directly from increases in the price of goods imported for resale, or indirectly from increases in the price of imported fuels, materials, and components necessary for domestic production.
